At Winters Performance, our mission is to offer unsurpassed quality control and customer service. We also realize it is all for naught if the product is not on the shelf. We want to be the company you like doing business with.

## ORDER POLICY

- Know your customer number.
- Order by part number. Winters will not be responsible for incorrect orders placed by description only.
- Specify shipping instructions - otherwise use our discretion.
- Refused orders will have a \$25.00 handling charge and applicable freight charges billed to the customers account.
- Special orders can not be cancelled after the order is in process.

## RETURN POLICY

**IMPORTANT:** All returns must include a Return Authorization Number (RA#). The issuance of an RA# does not constitute a guarantee of credit or replacement. Credit, refund or replacement will only be issued after an inspection and determination at our discretion. No returns are accepted on special order, obsolete, damaged, used or altered merchandise.

### ALL RETURNED MERCHANDISE MUST INCLUDE:

- RA# clearly written on outside of box as well as:
  - Customer number, name and phone number
  - Copy of invoice
  - Written explanation for cause of return
  - Whether return is for replacement, credit or refund

### Returned merchandise is subject to the following restocking fees (except sellers error):

- 1-90 days = 15%
- 91 days - 6 months = 25%

### • NO RETURNS AFTER 6 MONTHS

- Returns must be freight pre-paid (except sellers error).
- Returned parts must be packaged properly to avoid damage.
- Shipping damages must be reported immediately to your carrier.
- Shortage claims must be reported immediately.
- Save your cartons.

9110-96..... 8 Foot Cable Substitution

9112-1032-1 **If Applicable, Your Selected Option Numbers**

# SIDEWINDER

## STANDARD SHIFTER

A responsiveness that puts you far out ahead of your competition... the sureness that snaps you into the gear you want, when you want it... the kind of ruggedness that lets you slam it into gear without the fear of jamming or springing the mechanism... that's the Sidewinder Shifter for you! It's so well built, so finely engineered, so beautifully designed that you know at once... it has to be by Winters®.

The Sidewinder is fail-safe! It's mechanically impossible to accidentally shift into reverse from any forward gear. A sturdy, steel guard bars the shifting rod from all other positions except first, second or third. When you want reverse, only you can put it there. The Sidewinder can be installed on any street, strip or off road transmission. It is available in both conventional and reverse shift patterns. Our Standard Shifter comes completely assembled in a console with a five foot cable and mounting hardware. A number of options are available to tailor your application.

# SIDEWINDER

## LOCKOUT SHIFTER

A responsiveness that puts you far out ahead of your competition... the sureness that snaps you into the gear you want, when you want it... the kind of ruggedness that lets you slam it into gear without the fear of jamming or springing the mechanism... that's the Sidewinder Shifter for you! It's so well built, so finely engineered, so beautifully designed that you know at once... it has to be by Winters®.

The Sidewinder is fail-safe! It's mechanically impossible to accidentally shift into reverse from any forward gear. A sturdy, steel guard bars the shifting rod from all other positions except first, second or third. When you want reverse, only you can put it there.

The Sidewinder can be installed on any street, strip or off road transmission. It is available in both conventional and reverse shift patterns. Our Lockout Shifter features an extra mechanism that must be pulled up towards the knob in order to shift in and out of the reverse and park positions. This shifter also includes a safety switch that requires you to have the shifter in the park position in order to start your vehicle. These features satisfy all sanctioning body's rules and regulations.

# VALVE BODIES

## TURBO-HYDRO 400 CONVERSION KIT

### KIT P/N 1082

*Kit includes the following*

DESCRIPTION	P/N	QTY	DESCRIPTION	P/N	QTY
Top Gasket	1069	1	Aluminum Plug	1028	1
Separator Plate	1048	1	Steel Plug	1027	1
Bottom Gasket	1068	1	Manual Valve	1046	1
Modulator Plug	1002	1	5/16" Ball	7398	1

Our redesigned valve body is intended for competition only - the shift pattern has been reversed to P R N 1 2 3.

1. The following parts should be removed from the transmission since their use is no longer necessary.
  - A. Intermediate over-running band and apply servo parts.
  - B. Governor assembly
  - C. Governor supply tubes
  - D. Replace the modulator with aluminum plug P/N 1002 (retain valve in bore).
  - E. Remove all valve body check balls in case except one shown in Figure 1.
  - F. Remove center lip seal in direct clutch pack.
  - G. Park rod may be retained or removed at your option.
2. Punch out accumulator guide pin in valve body casting.
3. Install furnished 5/16" ball, P/N 7398, in shortest governor passage (closest to manual valve).
4. Substitute modulator on side of transmission case with furnished modulator plug, P/N 1002.
5. Top and bottom valve body gaskets are different - It is imperative that they be put in their proper positions. Compare to drawings in Figure 2 to make certain that holes noted are in gaskets supplied. Note the difference in Figure 2. "B" gasket must be installed between the main case and the separator plate.

## TURBO-HYDRO 400 MANUAL VALVE BODY

### Installation Instructions - Turbo-Hydro Reverse Pattern Manual Shift Valve Body

This valve body replaces stock cast valve body without alteration, except for removing all check balls in the case on all 1965 and later Turbo-Hydro 400 transmissions.

**NOTE:** It is necessary to use original manual valve in new aluminum valve body.

**CAUTION:** Make sure the manual valve has no scores or burrs on the outside surface that may mar the bore in the new aluminum valve body.

If nicks, burrs or scores are present, use a fine oil stone to smooth them so the valve slides through the bore smoothly.

Torque 5/16" bolts to 10 ft. lbs., Torque 1/4" bolts to 8 ft. lbs.

Remove vacuum line from modulator or replace modulator with Winters® P/N 1002, aluminum case plug. In either case, valve must be retained.

### Suggested Internal Transmission Modifications

1. Remove front over-run band.
2. Remove middle lip seal in direct (high) clutch drum.
3. Remove governor.
4. Replace original reverse servo release spring and inner piston with special band release spring (P/N 1006), available from Winters®, to further enhance performance and durability of your Turbo-Hydro 400.

We suggest the use of type "F" transmission fluid (Ford®).

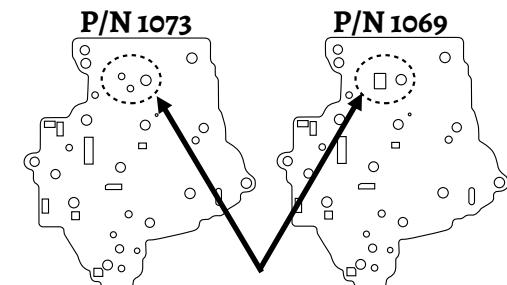

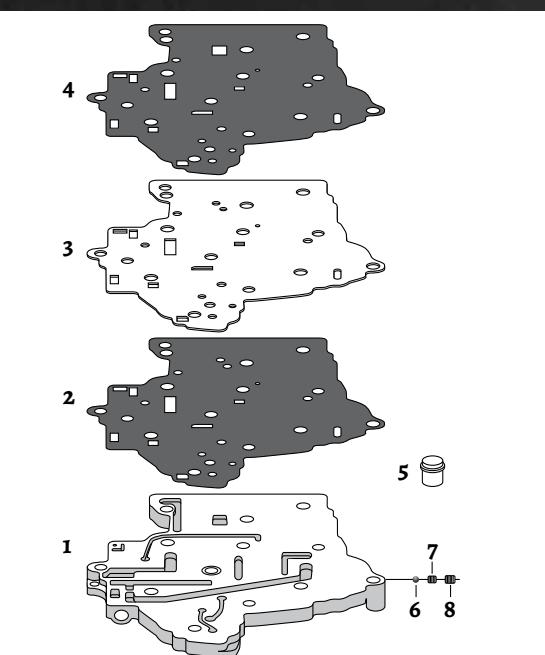

When Winters® special release spring (P/N 1006) is used in servo, stock spring and accumulator piston must be removed.

When our spring is not used and the stock spring and accumulator are used in the stock position, the rings on the accumulator piston must be removed. Otherwise, a no reverse condition will exist at times.

## KIT P/N 1042

*Kit includes the following*

#	DESCRIPTION	P/N	QTY
1	Channel Casting, TH400	1078	1
2	Bottom Gasket	1073	1
3	Separator Plate	1047	1
4	Top Gasket	1069	1
5	Aluminum Case Plug	1002	1
6	Steel Ball	7347	1
7	Ball Seat	5188	1
8	3/8-24 x 1/4" SS	7100	1

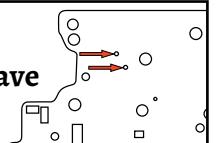

### NOTE THE DIFFERENCE

Gasket P/N 1069 (square hole) **MUST** be installed between the main case and separator plate.

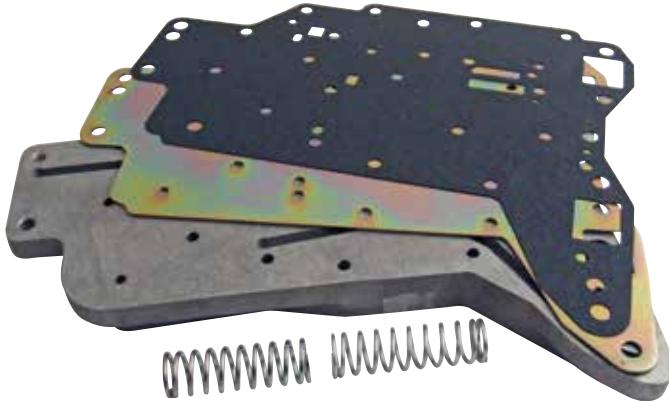

### Separator Plate P/N 1047

Confirm that 1/8" holes have been drilled at arrows.

# VALVE BODIES

## C - 6 MANUAL VALVE BODY

### KIT P/N 3040

*Kit includes the following*

DESCRIPTION	P/N	QTY
Regulator Spring (135 PSI)	3047	1
Regulator Spring (165 PSI)	3048	1
Gasket	3049	1
Separator Plate	3023	1
Channel Casting	3041	1

The C-6 Competition Valve Body Kit is designed to perfectly replace, without alterations, the stock channel casting, gasket and separator plate on all '68 and later valve bodies and also '67 GT series. This results in a manually controllable reversed shift pattern (P R N 1 2 3).

Since the pressure regulator is the ONLY ACTIVE VALVE used in the stock main upper body (see Figure 1), all other valves may be optionally discarded or left in place as desired. Valve body may be returned to stock condition in the future by retaining valves.

The governor assembly and modulator are no longer needed. Their removal is optional as is the kickdown rod and lever assembly for passing gear.

Proper reinstallation of the converter check ball and spring is important. This is necessary whether the valve body is used with a conventional converter type transmission or clutch type transmission.

**PLEASE NOTE:** Two pressure regulator springs are furnished. The 2 1/2" long spring (P/N 3047) produces 135 P.S.I. oil pressure and is to be used on all street and strip transmissions. The 2 1/4" long spring (P/N 3048) produces 165 P.S.I. oil pressure and is used on competition transmissions only. Fuel cars may install one or two 5/16" SAE flatwashers between spring and retainer plate to further increase oil pressure to a maximum of 185 P.S.I. Installation of these springs will require removal of both the stock springs and regulator boost valve assembly.

**NOTE:** Because of our exclusive oil circuitry, excessive oil pressure is neither necessary nor desirable and has little effect on shift response or shift feel.

No attempt to further modify the valve body should be made.

Band should be presoaked in type "F" fluid at least two hours prior to installation. Correct band adjustment is one (1) turn off.

While not absolutely essential, we recommend the use of the "F" band apply lever Ford P/N C6AZ-7330E. Also, strut P/N C6AZ-7DO29A. Use servo assembly type "R" (from Cobra Jet®) or type "H" (police interceptor) where applicable.

### Pressure Regulator Valve Assembly

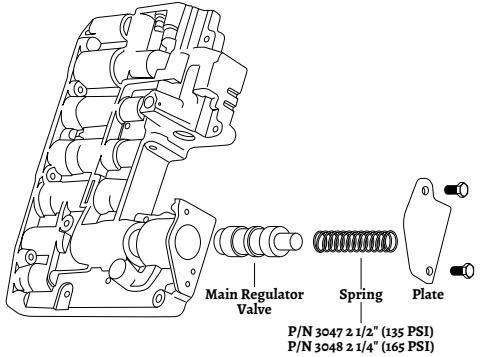

FIGURE 1

### Bleed Hole Position

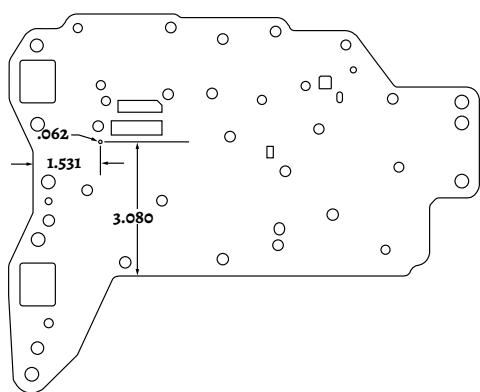

FIGURE 2

**CAUTION:** Check plate carefully to make sure the dimensioned bleed hole (.062), shown above, is drilled. This hole MUST be drilled as shown.

# VALVE BODIES

## C - 4 MANUAL VALVE BODY

Instructions for 1965 or 1966 C-4 Valve Body must be used.

All items circled in number 1 can be removed from the upper control body.

All items circled in number 2 are discarded and replaced with the pressure regulator spring, P/N 3502, provided.

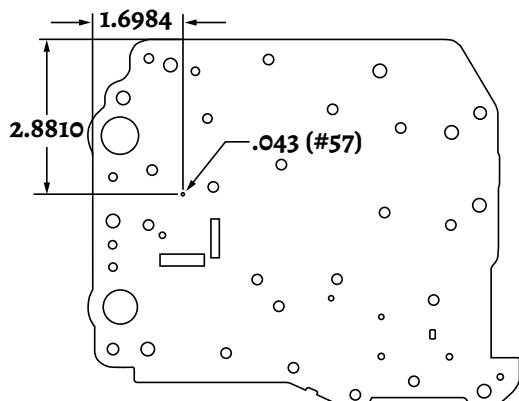

Refer to manufacturers manual for proper installation procedures and torque specifications.

### KIT P/N 3540

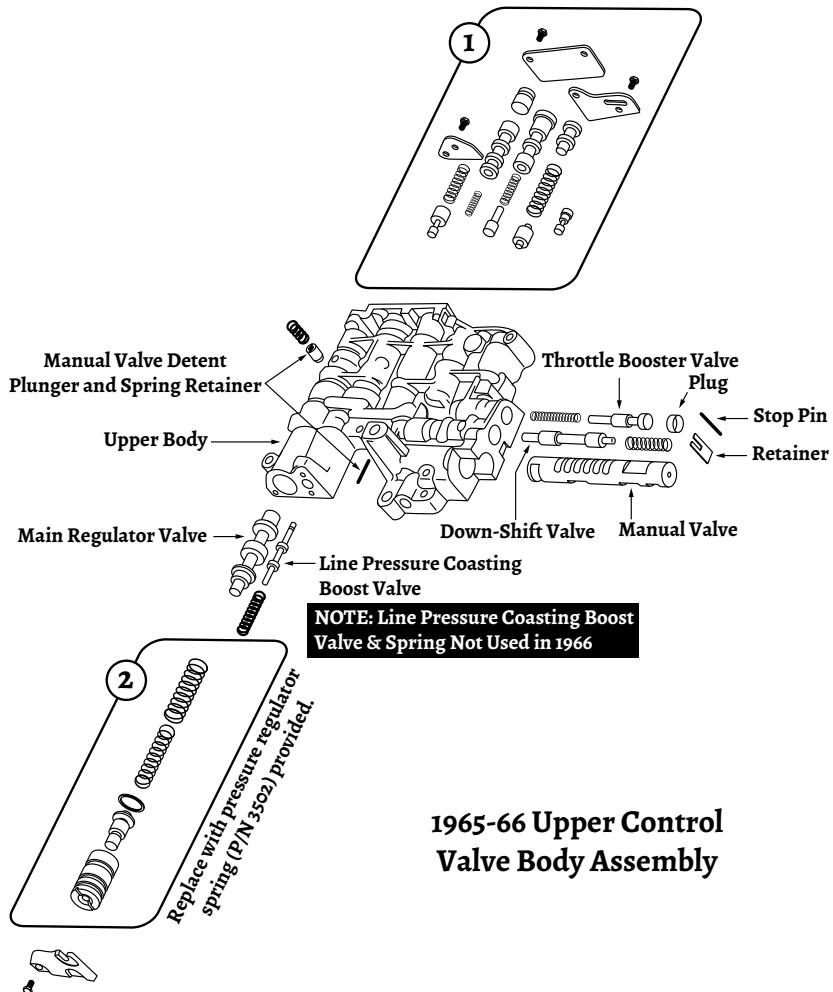

*Kit includes the following*

DESCRIPTION	P/N	QTY
Regulator Spring	3502	1
Separator Plate	3505	1
Channel Casting	3506	1

#### Separator Plate P/N 3505

**CAUTION:** Check separator plate P/N 3505 to make sure the dimensional bleed hole (.043) is drilled. This hole MUST be drilled as shown.

PLANETARIES  
ADVANTAGE SERIES  
IMPORTED GEAR SETS

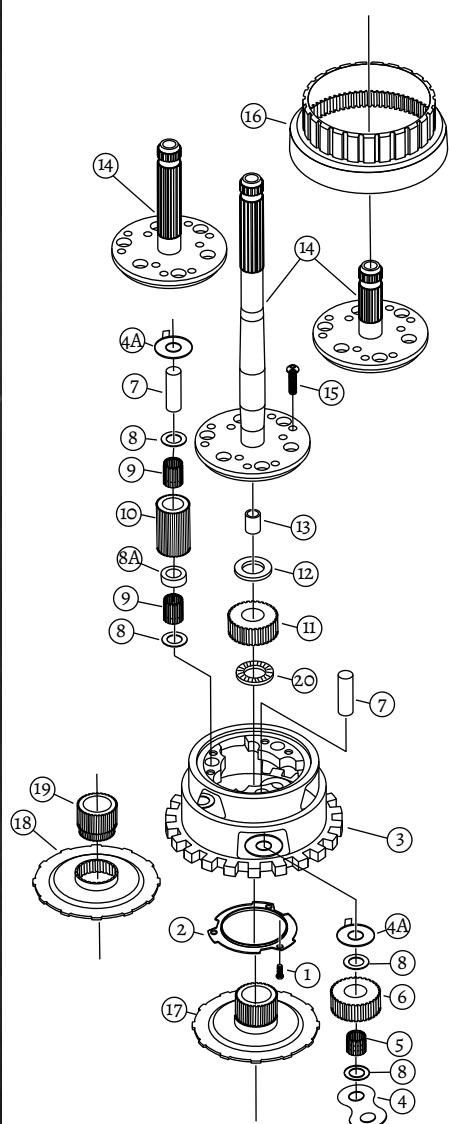

## ADVANTAGE SERIES IMPORTED GEAR SETS

The Advantage line of Powerglide planetary gears feature a 1.80 ratio, straight cut design. They are not manufactured by Winters, but have been used by leading performance transmission assemblers around the world for several years. They are dimensionally accurate and can be further enhanced by cryogenics (**Option 8276-PG**), a standard procedure in the manufacturing of Winters gears. The gear sets are backed by a one year warranty from the manufacturer. To further improve the performance and life of the gear sets, consider the popular REM® Finish (**Option 8218-PG**) which polishes the gear tooth to a mirror like finish to minimize friction and reduce the opportunity for stress cracks.

## HEAVY DUTY TAIL HOUSING KIT

### KIT P/N 4231

This kit upgrades the Powerglide to efficiently handle some serious horsepower. The output shaft has been enlarged up to 1 3/8" diameter with 32 splines (Turbo 400). This kit allows for installation of the heavy duty shaft by boring and installing bushing P/N 7515A in your Powerglide case. Will accept Winters Performance®, Mark Williams® and other Turbo 400 Slip Yokes.

## DRIVE ASSEMBLY - TURBO-HYDRO SPLINE

Winters® **Turbo-Hydro** Drive Assembly eliminates torque converter. This assembly is made from 4340 billet steel and is precision CNC machined to exacting tolerances.

**P/N 6866** (EARLY CHEVY®, LARGE BOLT PATTERN)  
**P/N 6866A** (EARLY CHEVY®, LARGE BOLT PATTERN, ALUMINUM)  
**P/N 6886** (LATE CHEVY®, '88 & UP BOLT PATTERN)  
**P/N 6866B** (FORD® SMALL BLOCK)  
**P/N 6866C** (MOPAR® 6 BOLT)  
**P/N 6866D** (CRANK COUPLER NOT DRILLED)

### Installation

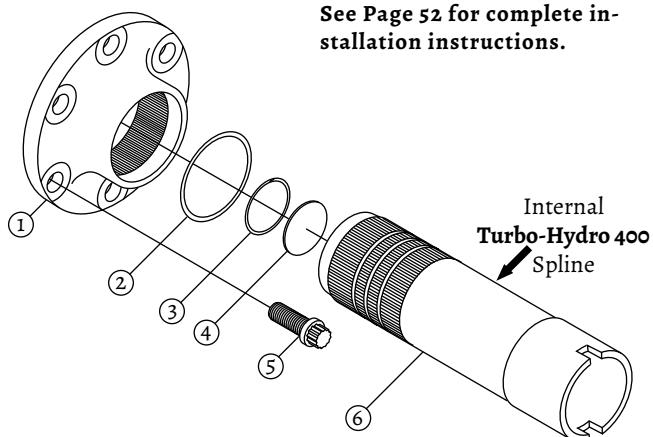

**Figure 1:** Install stock flex plate & crank coupler to engine crank shaft. Note the flange protruding from the face of the O.E.M. flex plate. Check that the protrusion on the flex plate does not keep crank coupler from seating against face of flex plate. If interference occurs, machine away enough flex plate protrusion to eliminate this problem. Torque crank coupler bolts (P/N 7739) to factory specs.

**Figure 2:** Indicate crank coupler to insure it is within + or - .002 run out (T.I.R. .004). Lubricate front pump and seal. Install drive sleeve into Powerglide front pump. Install Powerglide to engine, turning drive sleeve to engage splines in crank flange is essential.

**Caution:** Make sure drive sleeve has 1/16" to 1/8" end play fore and aft movement before transmission retaining bolts are torqued. Moving external retaining ring P/N 7614 will accomplish this.

**DO NOT** attempt to draw transmission against engine using bolts. If transmission will not seat against engine without force, contact your dealer for assistance.

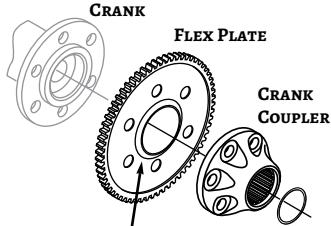

See Page 52 for complete installation instructions.

1	Band Apply Cover	5422	1	7	3/8-16 x 1 1/4" HHCS	7107	2
2	3/8-16 x 1" 12pt	7735	1	8	O'Ring, Plunger	7421	2
3	O'Ring, Cover	7419	1	9	Snap Ring	7616	2
4	Retaining Ring	7631	2	10	Plunger	5620	1
5	Pivot Sleeve	5615	1	11	Handle	5621	1
6	3/8" Flatwasher	7151	2	12	Handle Boot	2404	1

#### Installation Instructions

Exercise care when removing the original servo cover to insure that the band apply strut does not fall out of place.

Carefully install Winters® cover assembly, applying oil or petroleum jelly to the o'ring. Make sure the cover gasket is in place and all three bolts are started.

It is advisable to back off the band adjusting screw several turns before final torquing the retaining bolts. Tighten the retaining bolts in a criss-cross pattern until the cover is tight. Torque to 15 ft lbs.

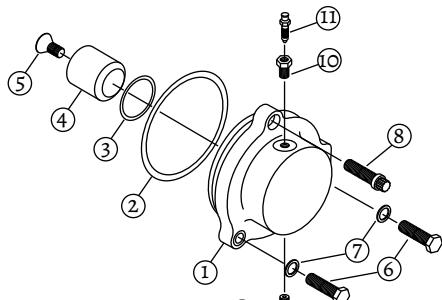

The band must now be re-adjusted to the factory specifications with the servo apply lever in a released position.

The band apply lever should be used positively to insure minimum band slippage, otherwise, accelerated band wear will result. However, excessive pressure can damage the transmission.

Push start in **NEUTRAL ONLY** at a preferred starting speed of 2 to 10 mph.

# POWERGLIDE

## COMPONENTS

### 30 SPLINE INPUT SHAFT

**P/N 2831** HyTuf® Spec Material

**P/N 2831V** VascoMax® Material

### ALUMINUM OIL PAN

#### ASSEMBLY P/N 3964

Assembly includes Reinforcing Flange (P/N 3974) and Plug (P/N 7874A).

### PUMP GEARS

Made from heat treated billet steel. Choose gears best suited for your application from the part numbers listed below.

DESCRIPTION	P/N
Powerglide, Stock	5690-01
Turbo-Hydro 400, Trans Brake	5690-04

# MISCELLANEOUS

## COMPONENTS

### C-6 REGULATOR SPRING

**P/N 3047**

This spring allows for 135 psi oil pressure and is to be used on all street and strip transmissions.

This may be found in our Ford® C-6 Manual Valve Body Kit. It measures 2 1/2" long.

### C-6 REGULATOR SPRING

**P/N 3048**

For competition transmissions only. This pressure regulator spring allows for 165 psi. This spring may be found in our Ford® C-6 Manual

Valve Body Kit. It measures 2 1/4" long.

### C-4 REGULATOR SPRING

**P/N 3502**

This pressure regulating spring is found in our Ford® C-4 Manual Valve Body Kit. When properly installed it creates the correct amount of oil pressure for your performance transmission.

### TORQUEFLITE 8 REGULATOR SPRING

**P/N 2005**

For ultimate shift response and longevity. TF-8 special regulator spring allows oil pressure to be raised from present high of approx. 115 psi to a low of 120, or a high of 140 psi with stock adjustment screw without shimming. Case reinforcing along pan or case girdle a necessity with this spring.

### MOTOR PLATE

**P/N 3829**

Ford Style, Small Block, 164 Tooth

### MOTOR PLATE

**P/N 3979**

Ford Style, Small Block, 157 Tooth

# TURBO-HYDRO 400

## COMPONENTS

### ALUMINUM FORWARD CLUTCH DRUM

#### P/N 4812

HyTuf® Spec Input Shaft

#### P/N 4812V

VascoMax® Input Shaft

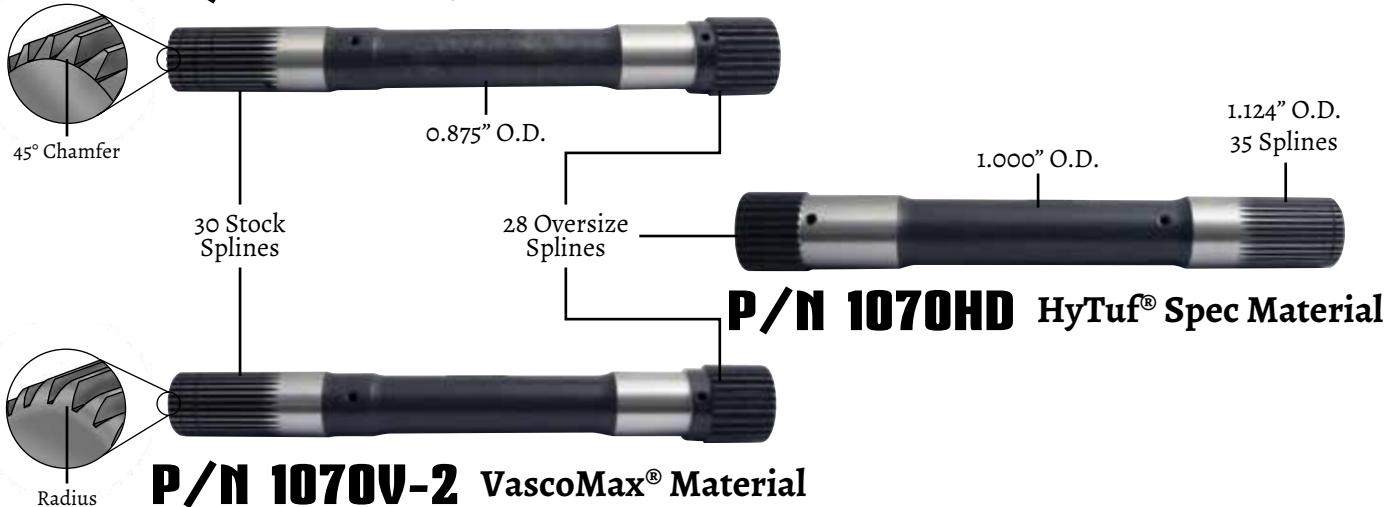

- 5 lbs 14 oz - 3 lbs 2 oz lighter than stock with most of the weight removed at a 6 3/4" diameter.
- Hard Anodized Billet Aluminum Clutch Drum
- Heat Treated Center Hub - 28 Splines at Center Hub

### HEAVY DUTY INPUT SHAFTS

For Drag Racing

#### P/N 1070 HyTuf® Spec Material

### RESPLINED FORWARD CLUTCH DRUM

#### P/N 1058 (Labor Only)

Double the torque capacity with 28 oversize splines. We take your stock drum, bore it and respline it. We can then install the 28 spline shaft of your choice.

These pieces eliminate the Turbo-Hydro's weak spot from high horsepower engines.

# TURBO-HYDRO 400

## COMPONENTS

### MANUAL VALVE P/N 1046

Manual valve to reverse shift pattern in Winters® style Turbo-Hydro 400 valve bodies.

### CASE PLUG P/N 1002

Replaces modulator with valve body conversion.

### REGULATOR SPRING P/N 1005

Heavy duty regulator spring for Turbo-Hydro 400 transmission. Boosts oil pressure to 175 psi.

### SERVO RELEASE SPRING P/N 1006

Turbo-Hydro special rear band servo release spring. This spring guarantees full band release when not in reverse, thus avoiding internal friction thru band drag. Suggested for use in competition built transmissions.

### INTERMEDIATE SHAFT

**P/N 4810H** HyTuf® Spec Material  
**P/N 4810V** VascoMax® Material

Replacement intermediate shaft for Turbo-Hydro 400. Choose from HyTuf® Spec or VascoMax® material.

### PUMP GEARS P/N 2701-01

Heat treated, stock configuration gears made from billet steel.

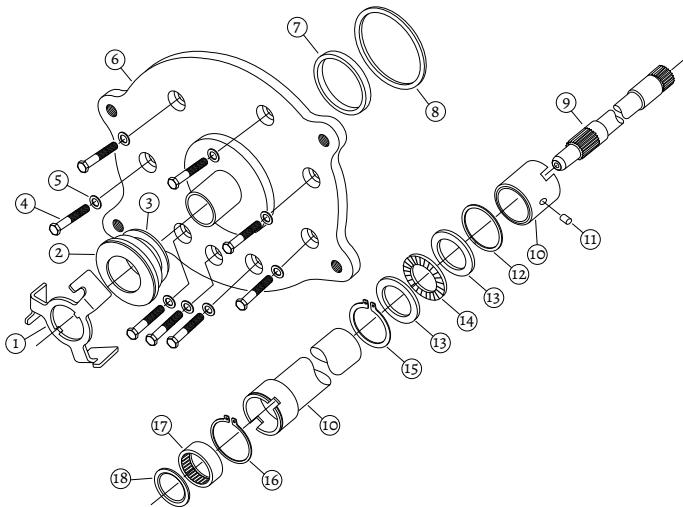

# CLUTCH HYDRO KIT

# SHIFTER INSTALLATION

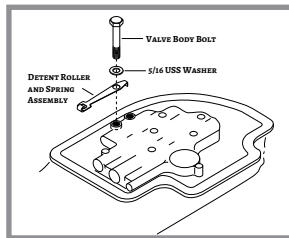

TURBO-HYDRO 400

## KIT P/N 1095

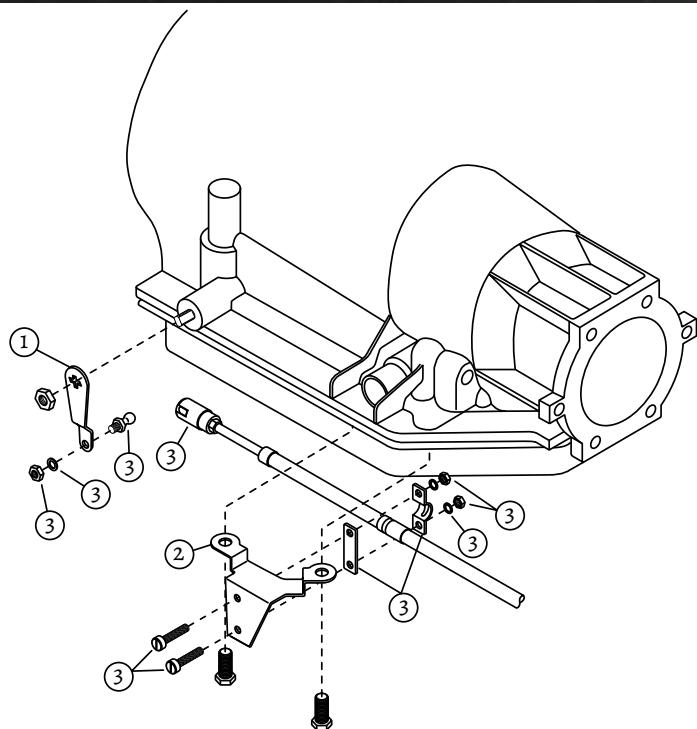

*Kit includes the following*

#	DESCRIPTION	P/N
1	Linkage Arm	1037
2	Cable Bracket	1036
3	Hardware Kit	6062

**Please Note:** The shift feel of the Turbo-Hydro 400 transmission can be greatly enhanced by placing a 5/16" USS washer between the valve body bolt and detent roller and spring assembly. To gain access to this bolt the transmission fluid must be drained and the pan removed.

Please consult factory service manual for removal instructions.

- A.** Remove shifting mechanism from transmission.
- B.** Assemble ball joint, lockwasher, and nut, to Winters® linkage arm, then remove nut and replace present arm with Winters® linkage arm. When arm is on the transmission, it should bend in towards the pan with the ball joint on the inside.
- C.** Remove two pan bolts and install cable bracket. Ensure pan bolt length is adequate.
- D.** Plan location of console and cable route in car. Keeping bends to a minimum will enhance the shift feel.
- E.** Drill 5/8" diameter hole in floor for cable to exit. By inserting a drill or rod in hole and bending the sheet metal, you can obtain a hole that will allow the cable to enter and exit more smoothly. After feeding the cable through, secure console in position using screws as shown in figure 3 on page 38.
- F.** Using screws, clamps, lockwashers, and nuts, attach cable to bracket as illustrated.
- G.** Attach quick-disconnect to ball joint on linkage arm. When console shift lever is in park position, the linkage arm should be all the way forward.
- H.** Check adjustment in each gear. By loosening locknut and screwing the quick-disconnect either in or out, corrective adjustments can be made.

# SHIFTER INSTALLATION

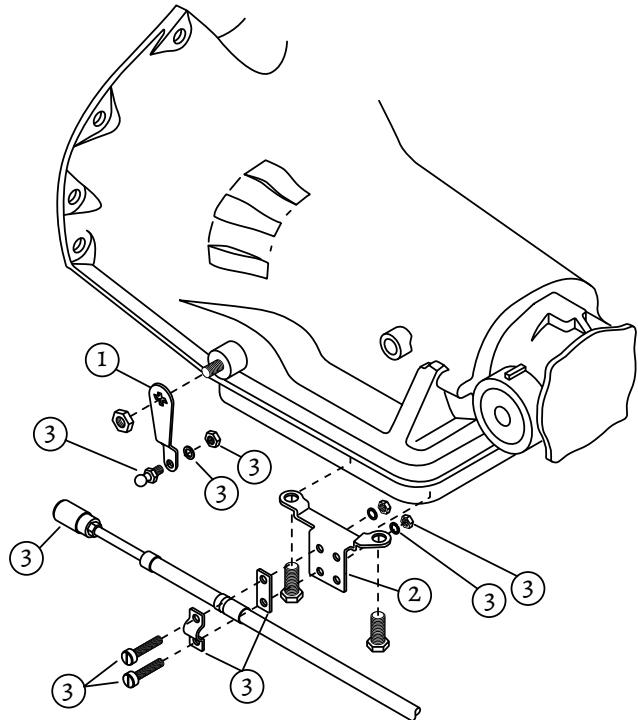

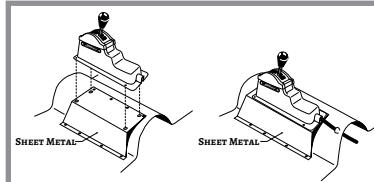

TURBO-HYDRO 350

## KIT P/N 1595

*Kit includes the following*

#	DESCRIPTION	P/N
1	Linkage Arm	1037
2	Cable Bracket	1500
3	Hardware Kit	6062

**FIGURE 3:** Illustrated is a suggestion for tunnel-mount applications of the Sidewinder Shifter. By bending a piece of sheet metal suitable for your application, a flat surface will be obtained allowing your shifter to be securely fastened in the proper location. Make sure the sheet metal is of substantial thickness (18 or 20 ga.) or securely braced to minimize undesirable vibration.

- A.** Remove shifting mechanism from transmission.
- B.** Assemble ball joint, lockwasher, and nut, to Winters® linkage arm, then remove nut and replace present arm with Winters® linkage arm.
- C.** Remove two pan bolts and install cable bracket. Ensure pan bolt length is adequate.
- D.** Plan location of console and cable route in car. Keeping bends to a minimum will enhance the shift feel.
- E.** Drill 5/8" diameter hole in floor for cable to exit. By inserting a drill or rod in hole and bending the sheet metal, you can obtain a hole that will allow the cable to enter and exit more smoothly. After feeding the cable through, secure console in position using screws as shown in figure 3.
- F.** Using screws, clamps, lockwashers, and nuts, attach cable to bracket as illustrated.
- G.** Attach quick-disconnect to ball joint on linkage arm. When console shift lever is in park position, the linkage arm should be all the way forward.
- H.** Check adjustment in each gear. By loosening locknut and screwing the quick-disconnect either in or out, corrective adjustments can be made. If additional adjustment is necessary, a similar arrangement within the console is provided.

# SHIFTER INSTALLATION

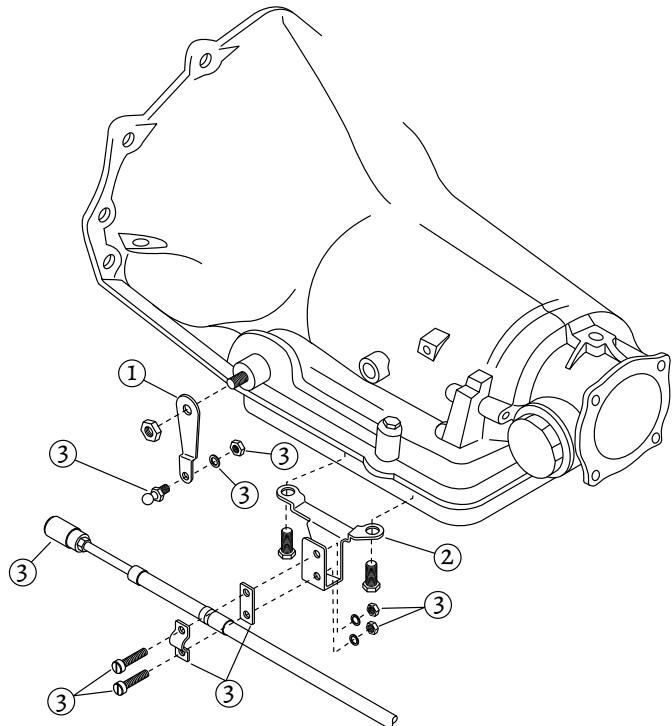

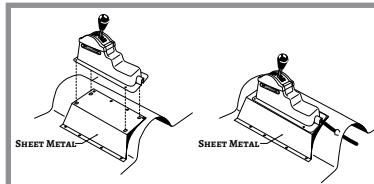

TURBO-HYDRO 700R4 & 4L60E

## KIT P/N 4095

*Kit includes the following*

#	DESCRIPTION	P/N
1	Linkage Arm	4011

POWERGLIDE

## KIT P/N 5595

*Kit includes the following*

#	DESCRIPTION	P/N
1	Inner Throttle Lever	†
2	Inner Manual Lever	†
3	Linkage Arm & Shaft	6123
4	Outer Throttle Lever	†
5	Cup Plug	7763
6	Cable Bracket	6126
7	Hardware Kit	6062

† Items marked are part of the transmission.

- A.** Remove present shifting mechanism from transmission.
- B.** Refer to appropriate transmission service manual for procedure to drain oil, remove oil pan and disassemble stock throttle and manual levers.
- C.** Replace stock outer manual lever with Winters® outer manual lever. On applications not using the throttle lever hookup, the provided cup plug must be inserted in the counterbore of the Winters® outer manual lever to prevent fluid leakage.
- D.** Before re-assembling all parts to the transmission, make sure the Winters® outer manual lever will operate through all detent positions without interfering with any external transmission parts.
- E.** After all internal transmission components are re-assembled and before all pan bolts are tightened, attach Winters® cable bracket in position with the two left rear corner pan bolts. Ensure pan bolt length is adequate.
- F.** Plan location of console and cable route in car. Keeping bends to a minimum will enhance the shift feel.
- G.** Drill 5/8" diameter hole in floor for cable to exit. By inserting a drill or rod in hole and bending the sheet metal, you can obtain a hole that will allow the cable to enter and exit more smoothly. After feeding the cable through, secure console in position using screws as shown in figure 3 on page 40.
- H.** Attach cable to cable bracket with provided hardware.
- I.** Attach quick-disconnect end of cable to outer manual lever.
- J.** Check adjustment in each gear. By loosening locknut and screwing the quick-disconnect either in or out, corrective adjustments can be made.

# SHIFTER INSTALLATION

727, 904 & 999 TORQUEFLITE TF-6 & TF-8 &  
AMERICAN MOTORS

- A.** Remove present shifting mechanism from transmission.
- B.** Before assembling parts on transmission, assemble ball joints to linkage arm and pivot arm, using washers and nuts, as illustrated in figure 1 on page 45.
- C.** Assemble linkage arm on transmission and tighten bolt.
- D.** Assemble pivot arm on transmission by inserting pivot bolt through transmission pad and tightening nut. The pivot arm can then be secured to the pivot bolt with the spring washer, flat washer, and cotter pin in position as illustrated in figure 2 on page 45.
- E.** Attach the connecting rod by pushing ends over the ball joints.
- F.** Attach the ball joint to the pivot arm using lockwasher and nut.
- G.** Remove two pan bolts and install cable bracket in position. Ensure pan bolt length is adequate.
- H.** Plan location of console and cable route in car. Keeping bends to a minimum will enhance the shift feel.
- I.** Drill 5/8" diameter hole in floor for cable to exit. By inserting a drill or rod in hole and bending the sheet metal, you can obtain a hole that will allow the cable to enter and exit more smoothly. After feeding the cable through, secure console in position using screws as shown in figure 3 on page 43.
- J.** Using screws, clamps, lockwashers, and nuts, attach cable to bracket as illustrated in figure 1.
- K.** Attach quick-disconnect to ball joint on pivot arm.
- L.** Check adjustment in each gear. By loosening locknut and screwing the quick-disconnect either in or out, corrective adjustments can be made. If additional adjustment is necessary, a similar arrangement within the console is provided.

3	Hardware Kit	6062

**FIGURE 3:** Illustrated is a suggestion for tunnel-mount applications of the Sidewinder Shifter. By bending a piece of sheet metal suitable for your application, a flat surface will be obtained allowing your shifter to be securely fastened in the proper location. Make sure the sheet metal is of substantial thickness (18 or 20 ga.) or securely braced to minimize undesirable vibration.

- A.** Remove present shifting mechanism from transmission.
- B.** Refer to appropriate transmission service manual for procedure to drain oil, remove oil pan and disassemble stock linkage arm and shaft.
- C.** Replace stock linkage arm and shaft with Winters® linkage arm and shaft. Use appropriate assembly procedures from transmission service manual.
- D.** Before re-assembling all parts to the transmission, make sure the Winters® linkage arm and shaft will operate through all detent positions without interfering with any external transmission parts.
- E.** Plan location of console and cable route in car. Keeping bends to a minimum will enhance the shift feel.
- F.** Drill 5/8" diameter hole in floor for cable to exit. By inserting a drill or rod in hole and bending the sheet metal, you can obtain a hole that will allow the cable to enter and exit more smoothly. After feeding the cable through, secure console in position using screws as shown in figure 3.
- G.** Using screws, clamps, lockwashers, and nuts, attach cable to bracket as illustrated.
- H.** Attach quick-disconnect to ball joint on linkage arm. When console shift lever is in park position, the linkage arm should be all the way forward.
- I.** Check adjustment in each gear. By loosening locknut and screwing the quick-disconnect either in or out, corrective adjustments can be made. If additional adjustment is necessary, a similar arrangement within the console is provided.

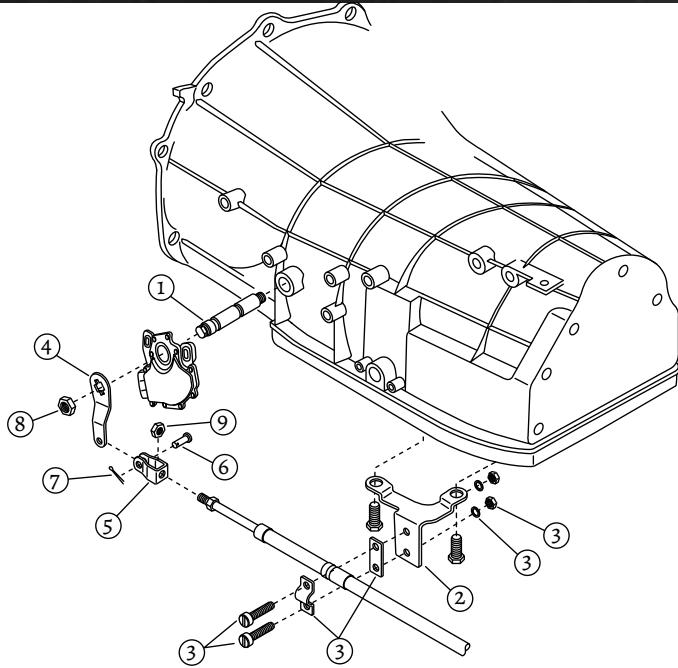

# SHIFTER INSTALLATION

FORD® E4OD & 4R100

## KIT P/N 3395

*Kit includes the following*

#	DESCRIPTION	P/N
1	Linkage Shaft	3721
2	Cable Bracket	3723
3	Cable Clamp Package	6062-1
4	Linkage Arm	3722
5	Clevis Bracket	3724
6	Clevis Pin	8743
7	Clevis Clip	8744
8	Linkage Shaft Nut	7766
9	Jam Nut	7926

- A.** Remove present shifting mechanism from transmission.
- B.** Refer to appropriate transmission service manual for procedure to drain oil, remove oil pan and disassemble stock linkage arm and shaft.
- C.** Replace stock shaft with Winters® shaft (P/N 3721). Use appropriate assembly procedures from transmission service manual. Reinstall stock switch then attach Winters® linkage arm (P/N 3722) to Winters® shaft (P/N 3721) using linkage shaft nut (P/N 7766).
- D.** Before re-assembling all parts to the transmission, make sure the Winters® linkage arm and shaft will operate through all detent positions without interfering with any external transmission parts.
- E.** Plan location of console and cable route in car. Keeping bends to a minimum will enhance the shift feel.
- F.** Drill 5/8" diameter hole in floor for cable to exit. By inserting a drill or rod in hole and bending the sheet metal, you can obtain a hole that will allow the cable to enter and exit more smoothly. After feeding the cable through, secure console in position using screws as shown in figure 3 on page 51.
- G.** Using screws, clamps, lockwashers, and nuts, attach cable to bracket as illustrated.
- H.** Attach clevis bracket (P/N 3724) to end of cable using clevis nut (P/N 7926). Install end of cable to linkage arm using clevis pin (P/N 8743) and clip (P/N 8744).
- I.** Check adjustment in each gear. By loosening locknut and screwing the clevis bracket (P/N 3724) either in or out, corrective adjustments can be made. If additional adjustment is necessary, a similar arrangement within the console is provided.

# SHIFTER INSTALLATION

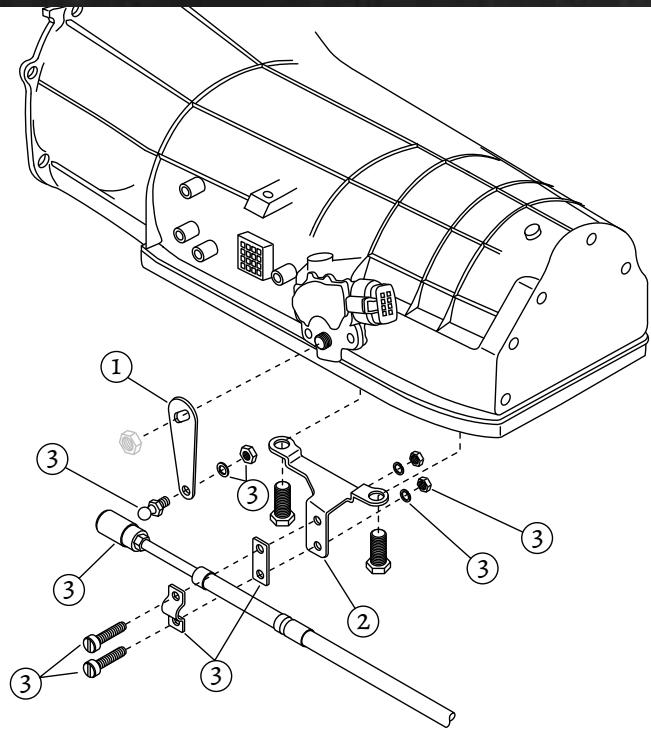

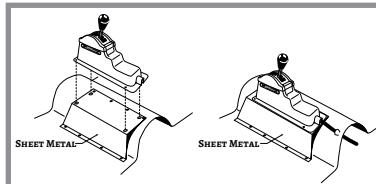

FORD® A4LD

## KIT P/N 3027

*Kit includes the following*

#	DESCRIPTION	P/N
1	Linkage Arm	12746
2	Cable Bracket	12748
3	Hardware Kit	6062

**FIGURE 3:** Illustrated is a suggestion for tunnel-mount applications of the Sidewinder Shifter. By bending a piece of sheet metal suitable for your application, a flat surface will be obtained allowing your shifter to be securely fastened in the proper location. Make sure the sheet metal is of substantial thickness (18 or 20 ga.) or securely braced to minimize undesirable vibration.

- A.** Remove shifting mechanism from transmission.
- B.** Assemble ball joint, lockwasher, and nut, to Winters® linkage arm, then remove nut and replace present arm with Winters® linkage arm.
- C.** Remove two pan bolts and install cable bracket. Ensure pan bolt length is adequate.
- D.** Plan location of console and cable route in car. Keeping bends to a minimum will enhance the shift feel.
- E.** Drill 5/8" diameter hole in floor for cable to exit. By inserting a drill or rod in hole and bending the sheet metal, you can obtain a hole that will allow the cable to enter and exit more smoothly. After feeding the cable through, secure console in position using screws as shown in figure 3.
- F.** Using screws, clamps, lockwashers, and nuts, attach cable to bracket as illustrated.
- G.** Attach quick-disconnect to ball joint on linkage arm. When console shift lever is in park position, the linkage arm should be all the way forward.
- H.** Check adjustment in each gear. By loosening locknut and screwing the quick-disconnect either in or out, corrective adjustments can be made. If additional adjustment is necessary, a similar arrangement within the console is provided.

# INSTALLATION INSTRUCTIONS

## DRIVE ASSEMBLY

Proper installation of the crank coupler to the crank is important since crank coupler run out can cause drive sleeve run out in excess of .004 T.I.R. maximum (Figure 2).

It is suggested that S.F.I. approved 153 tooth automatic flex plate and a compatible starter be used with your Powerglide installation. Welding weights on a flex plate for crank balance is not recommended; however, drilling holes for balance is permissible. It is preferable for all crank balance to be done internally. Check the flex plate before mounting it on the crank for nicks or high spots that would cause flex plate or crank coupler run out (Figure 1).

After determining coupler bolts are correct length, torque the crank coupler bolts evenly to factory specifications (Figure 2).

Carefully install the drive sleeve in the transmission making sure that the input shaft splines and the pump gear drive lugs are compatible and properly engaged.

**ALSO NOTE:** Dowel pins must extend out of the engine block enough to have good engagement in the transmission to properly locate it on the engine. On engines using a block plate, new, longer pins must be installed. Use care when installing the pins to be sure that they are true and square. This is important, do not ignore it.

Your transmission may now be installed on the engine. **-DO NOT USE FORCE-** If the transmission won't mate against the block, check for the cause. If the transmission mates satisfactorily, only then do you install the retaining bolts and torque to factory specifications.

Note the spiral lock snap ring in the rear radial groove through the splines on the drive sleeve. Moving this snap ring to another groove allows for lateral adjustment of the sleeve movement for the proper engagement of the drive pump ears in the transmission pump. Engine torque plate thickness will dictate which groove to use to limit the drive sleeve movement to the suggested 1/16" to 1/8" fore and aft travel.

**NOTE:** Check and consider crank shaft end play when determining if the drive sleeve movement is to specifications. Too much or too little drive sleeve end play will destroy the transmission front pump, so don't take any chances.

When the transmission is bolted directly to the engine (i.e. when no block plate is used) the snap ring may have to be discarded for proper sleeve adjustment.

Some Chevy® cranks for standard transmissions are not machined with the same bore dimensions as for automatics. If the pilot bushing in the stick crank affects proper sleeve lateral movement, corrections must be made to comply with the master installation instructions. Sometimes shimming is necessary or the pilot bushing may be removed. Transmission life depends on proper installation.

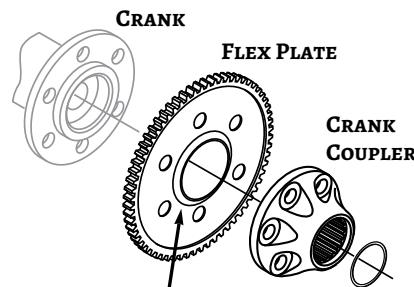

FIGURE 1

**NOTE** flange protruding from face of O.E.M. flex plate. Check that the protrusion on the flex plate does not keep crank coupler from seating against face of flex plate. If interference occurs, machine away enough flex plate protrusion to eliminate this problem. With crank coupler installed and torqued to factory specs, indicate as shown in Figure 2.

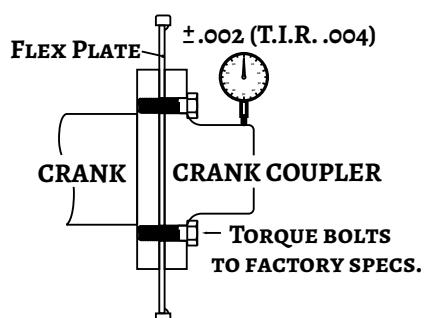

FIGURE 2

**DO NOT** attempt to draw transmission against engine using bolts. If transmission will not seat against engine without force, contact your dealer for assistance.

# LIMITED WARRANTY

## BACKGROUND

Winters Performance Products, Inc., referred to herein as Winters, manufactures parts and equipment which are purchased by persons in various industries, who may install and use Winters parts and equipment in applications which may not be suitable for that Purchaser's intended purpose. Purchaser understands, recognizes and acknowledges that all parts and equipment manufactured or sold by Winters are exposed to many, varied and unforeseeable uses and conditions. As a consequence, Winters can make no promise, warranty, affirmation or representation as to the performance of its parts or equipment, nor does Winters make any description of the parts or equipment sold to Purchaser, nor does Winters make any description or affirmation of fact concerning any sample or model of parts or equipment except as specifically set forth in this Limited Warranty. As further consideration for Purchaser using Winters' parts or equipment, Purchaser acknowledges that, due to differing conditions and circumstances under which all parts and equipment are installed and used, Purchaser is not relying on Winters' skill and judgment to select or furnish the proper part or equipment. Purchaser expressly affirms that it is relying on its own expertise, skill, and judgment to select, purchase and install parts or equipment which are suitably safe and durable for their intended purpose. Purchaser assumes all risks associated with the performance of Winters' parts.

## LIMITED WARRANTY

Winters warrants to Purchaser that any part or equipment manufactured by Winters ("a Part") will conform to the description of such Part contained in the catalog most recently published by Winters prior to the time of sale of such part or equipment to Purchaser ("the Description"). **WINTERS MAKES NO OTHER WARRANTY, EITHER EXPRESS OR IMPLIED WITH RESPECT TO ANY PART. WINTERS EXPRESSLY DISCLAIMS ANY WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR USE OR PURPOSE AND EXPRESSLY DISCLAIMS ANY WARRANTY AS TO THE PERFORMANCE OF ANY PART.** The liability of Winters for breach of the foregoing warranty is limited to repair or replacement of any Part determined to fail to conform to its Description prior to installation and use. The burden of establishing that any Part fails to conform to its Description shall be upon Purchaser. In order to be entitled to repair or replacement of any Part, Purchaser must (i) inspect the part upon receipt; and (ii) notify Winters in writing of the defect **PRIOR TO INSTALLATION OF THE PART.** In no event shall Winters be liable hereunder for any Part which has been installed. Purchaser assumes all risks relating to a Part once such Part is installed. **WINTERS SHALL NOT BE LIABLE FOR ANY CONSEQUENTIAL, SPECIAL OR INDIRECT DAMAGES (INCLUDING BUT NOT LIMITED TO LOST PROFITS) OR FOR LOSS OR DAMAGE DIRECTLY OR INDIRECTLY ARISING FROM THE USE OF A PART.** Every claim under this Limited Warranty shall be deemed waived unless made in writing within ninety (90) days of delivery of the Part by Winters to Purchaser. Purchaser acknowledges that, due to the multiple uses of Parts, it is impossible for Winters to predict the performance of any Parts once installed or the suitability of any Parts for any particular use. Purchaser expressly acknowledges its obligation to inform all users (customers) of the above disclaimer.

## INDEMNITY AGAINST THIRD PARTY CLAIMS

**PURCHASER HEREBY AGREES TO INDEMNIFY AND HOLD HARMLESS WINTERS FROM AND AGAINST ANY AND ALL CLAIMS, LIABILITY, LOSS AND DAMAGES, INCLUDING ATTORNEYS FEES, MADE BY ANY THIRD PARTY AGAINST WINTERS RELATING TO A PART OR THE USE OF ANY PART.** Purchaser understands and agrees that no officer, director, employee or agent of Winters (including but not limited to any vendor, dealer or distributor) has any authority to make any statements contrary to the terms of this Limited Warranty. Winters specifically disavows any statements contrary to what is written above.

## CHOICE OF LAW/VENUE

This Limited Warranty shall be governed by and construed in accordance with the laws of the Commonwealth of Pennsylvania. Any legal action which may arise as a result of disputes, controversies, or claims arising out of or related to this Limited Warranty or the purchase or use of any Part shall be litigated exclusively in the Court of Common Pleas of York County, Pennsylvania or the United States District Court for the Middle District of Pennsylvania.

## MISCELLANEOUS

This writing constitutes the full, complete and final statement of Winters' Limited Warranty for Parts. All prior oral and written correspondence, test data, negotiations, representations, understandings and the like regarding Parts are merged in this writing and extinguished by it. This Limited Warranty may not be altered, amended, extended or modified except by a writing signed by the President or Vice President of Winters. Winters' failure at any time to enforce any of the terms and conditions stated herein shall not constitute a waiver of any of the provisions herein. This Limited Warranty shall not be assigned by Purchaser. Winters' responsibility for merchandise shipped via common carrier ceases upon delivering the order to the carrier. Winters is not responsible for merchandise lost or damaged in transit. Purchaser must file a claim with the delivery carrier for merchandise lost or damaged during transit. Winters will assist Purchaser by supplying any information necessary for submission of a claim. It is the responsibility of the Purchaser to comply with all laws and regulations, Federal, State and Local, governing resale of products sold by Winters. NSF Charge: \$45.00 per returned check/payment. Repayments must be made by cashier check or money order. **WHEN YOU PROVIDE A CHECK AS PAYMENT, YOU AUTHORIZE US EITHER TO USE THE INFORMATION FROM YOUR CHECK TO MAKE A ONE-TIME ELECTRONIC FUND TRANSFER FROM YOUR ACCOUNT OR TO PROCESS THE PAYMENT AS A CHECK TRANSACTION.**

On request, parts manufactured by Winters Performance Products, Inc. are available in super strength heat treated steel at extra cost and special order. Refer to machinery handbook for strengths of other materials.

RACING IS A DANGEROUS SPORT THAT CAN RESULT IN SERIOUS INJURY OR DEATH. THE ULTIMATE RESPONSIBILITY FOR PARTICIPANT AND VEHICLE SAFETY LIES WITH THE PARTICIPANT.
